the downgrade, markets saw significant movements in longer-dated treasuries, with the U.S. 10-Year Treasury Yield rising back above 4%. Additionally, jobs data contributed to the risk-off sentiment as recent figures showed that the labor market remained resilient despite the Federal Reserve's aggressive rate-hiking policy. The unemployment rate declined back to 3.5%, reaffirming a tight job market. However, the report also indicated that the economy added fewer than 200k jobs this month, falling below economists' estimates, raising questions about the pace of economic growth. While the job market showed resilience, signs of economic softening emerged as corporate earnings appeared weaker than expected. Looking ahead, traders are eagerly anticipating updates on inflation data, as two popular gauges for inflation, the Consumer Price Index and the Producer Price Index, both report this week. These data releases will offer valuable indications and clarity on the Federal Reserve's potential path forward in their next meeting scheduled for September. Internationally, equities also experienced a decline of 2.38%, reflecting the broad- based concerns impacting global markets. Furthermore, the Bank of England took action by raising interest rates by 25 basis points to 5.25% in response to the surging inflationary pressures.	5-Year U.S. Treasuries 10-Year U.S. Treasuries 10-Year German Bund 6-mo.
